

Tourism App - Technical Summary

Technologies Used

- Frontend: Flutter (Dart)
- Backend: Spring Boot (Java)
- Database: MySQL
- API Architecture: Microservices with API Gateway
- Service Discovery: Eureka
- Build Tools: Gradle
- IDE: VS Code / IntelliJ

Security

- Authentication: JWT (JSON Web Token)
- Framework: Spring Security
- Protected Endpoints: Hotels, Restaurants, Reservations
- Public Endpoints: Beaches

Features Implemented

- User Authentication (Login/Register)
- Swipe Interface (Hotels, Restaurants, Beaches)
- Dynamic API Integration
- Profile Page
- Reservation System

UI/UX Design

- Modern card-based swipe UI
- Gradient headers (Senegal theme)
- Custom detail screens
- Reusable components

Planned Features

- Notifications system
- Cultural sites module
- Favorites system
- User reviews & comments
- Profile stats (favorites, trips, reviews)
- Map integration (Google Maps)

Image Management

- Current: URL-based images

- Future: Cloud storage (Cloudinary / Firebase / AWS S3)
- Profile image upload and persistence

DevOps & Deployment

- Docker & Docker Compose for service orchestration
- Single command startup for all services
- Scalable architecture
